

COLOCATION

alpha TECHNOLOGIES COLOCATION

Colocation is the practice of renting space for your servers and other computing hardware in a third-party Data Center. Typically, colocation services include the building in which equipment is housed, as well as networking, physical security, redundant power, and redundant cooling components that support the servers and storage provided to the customer. A colocation solution means that you eliminate the expense of building and maintaining your own data center, while allowing complete retention and ownership of your physical servers.

Hosting with **alpha** DC01 provides:
